## **FOR IMMEDIATE RELEASE**

### **SST GROUP to INTRODUCE DMC-EZ ENTERPRISE™, the FIRST SINGLE SERVER, MULTIPLE DISCPRODUCER SOLUTION, at RSNA, BOOTH 3254**

#### **Now a Single User Can Create DICOM CDs Using Multiple Discproducers Throughout a Healthcare Facility**

**Santa Clara, CA, November 16, 2015** – SST Group, a leading provider of medical disc publishing solutions, PACS software and accessories will unveil an enterprise version DICOM CD/DVD burner solution at the 2015 RSNA conference in Chicago, Ill., November 29 through December 3.

The DMC-EZ Enterprise™ network disc publishing solution provides healthcare facilities with the security of a single internal server, while at the same time providing users with the ability to utilize multiple Discproducers™ located throughout the facility. DMC-EZ Enterprise addresses the IT Department's security requirements, yet gives users the freedom to choose to which location a CD/DVD will be burned. For high-use areas, load balancing between two or more Discproducers is available. From hard copy CD/DVDs to secure electronic delivery of images, the DMC EZ Enterprise addresses all a medical facility's image delivery needs.

The DMC-EZ Enterprise browser-based interface provides on-demand CD and DVD creation of DICOM studies and other PHI elements from anywhere on a network. Images, reports and EMR data are bundled with a comprehensive DICOM viewer and sent to any Discproducer located on the network. Multiple Discproducers can be located throughout the facility, for example the film room, ED, medical records, CT, MG and other locations. All disc activity flows to a single log file which can be accessed by the administrator from anywhere on the network.

With the inclusion of SST Group's popular DICOM Virtual Media Creator (DVM™), users will also have the ability to create electronic copies of patient studies and send them to necessary stake holders. DVM Lite provides a simple, fast and secure way to deliver DICOM images outside a facility while maintaining HIPAA/HITECH compliance. With DVM Lite, sharing protected health information (PHI), including DICOM images, is as simple as sending an email. The receiver simply decrypts the package using a secure password and the electronic patient file containing the PHI opens on the user's desktop.

DMC-EZ Enterprise includes an import tool which allows facilities to upload external studies. An embedded web server and web viewer provides an alternate view of these studies, eliminating the need to store them on PACS. The DMC-EZ Enterprise has numerous best-of-class software features such as study disc encryption, rules based DICOM routing, option to download to USB flash and a convenient back-up tool.

“The DMC-EZ Enterprise addresses the needs of many large facilities in the United States,” explains Richard Murphy, President, SST Group, Inc. “These large sites have been demanding a single, secure server to be managed by the IT department than can drive numerous disc publishing systems at multiple locations. The DMC-EZ Enterprise easily meets this need. ”

### **About SST Group**

Based in the heart of Silicon Valley, SST Group has been an innovative leader in DICOM image delivery and management since 2004. Products range from simple data storage to specialized DICOM medical solutions and include image delivery systems, DICOM utilities and software designed to store, organize and share medical images within PACS systems. As a key partner to leading medical equipment manufacturers, SST solutions are bundled with PACS solutions and DICOM modalities such as CT, MR, XA, and are used in over 2500 hospitals and private clinics worldwide. For more information about SST Group visit [www.sstgroup-inc.com](http://www.sstgroup-inc.com). Follow SST Group via Facebook, LinkedIn and Google+ and subscribe to product update emails and newsletters through the link on the homepage. DMC-EZ Enterprise is a trademark of SST Group, Inc., and is part of a family of EZ hardware and software products designed to help medical professionals manage and distribute medical information.
