DICOM PACS/EMR

DMC - EZ DICOM QC Module

DMC-EZ DICOM QC Module is a valuable tool for any PACS administrator. Installed on a DMC-EZ burner, it allows the administrator to correct discrepancies between acquired images and patient information associated with those images. The EzDicom QC Module gives the PACS administrator the ability to auto-match Patient and Study information from the Worklist or PACS, as well as to manually correct errors. This helps ensure consistent information throughout your organization.

DMC-EZ DICOM QC Module Software
